Rubrics

Rubrics的使用归类

1. 利用Rubrics评估数据质量
   a. 评估最终生成的答案（e.g., 评估一份技术报告）
   b. 评估Agent过程，评估trajectory (e.g., 生成了多个coding的diff文件，评估哪一个最好并deploy)
2. 利用Rubrics生成高质量数据
   a. 生成偏好数据 / DPO 数据
   b. 把 rubric 变成训练奖励，做 RL / post-training

Rubrics按照模型阶段分类

1. **训练阶段（training-time / post-training）**：rubrics 主要负责把“好输出”的标准变成**监督信号、偏好信号、奖励信号**。
2. **推理阶段（inference-time / deployment-time）**：rubrics 主要负责把额外推理算力用在**候选筛选、反思修正、过程验证**上。
3. **评测阶段作为 judge criteria：**rburics主要负责评测Agent/model的输出质量。
